

# Creep into the DEEPEND™

**MEGAN WEBER**

NOVA SOUTHEASTERN UNIVERSITY

## STUDIES:

Small shrimps from shallow to the deep waters-both pelagic and coastal regions.

## DEEPEND FOCUS

Abundances and distributions of euphausiids (a type of shrimp) in the northeastern part of the Gulf of Mexico.

## HAS STUDIED:

Freshwater fish abundances and population mechanisms mainly in Colorado and Wyoming, fisheries ecology, lab work with microbiological growth and colony structure in Florida.

## SOMETHING SURPRISING ABOUT MEGAN:

I like to try one new thing a day. This can be something small, like cooking a new dish to exploring a new area of the town/state. I love to try new things!

## THREE THINGS MEGAN DOES TO HELP THE EARTH:

I conserve as much energy and water in my daily life as possible, avoid using plastic water bottles and most plastics in general, and recycle as much as I possibly can.
