SEAMAIL™

FROM: DEEPEND Science Team
TO: DEEPEND Virtual Team Leaders
SUBJECT: Cups take a trip and feel the pressure!

Hi Virtual Science Team Members,

Some of you asked specifically how your cups were taken in to the deep. As you know, the DEEPEND cups start as regular sized (8 oz) cups. A Science Team Member placed the cups inside a netted bag then attached it to the CTD. The CTD measures Conductivity, Temperature, and Depth.

The CTD is sent down with MOCNESS to gather data at the same depths as the MOCNESS collects specimens.
